CASES OF DISEASES WHICH ARE OF SPECIAL INTEREST.	19

WEEKLY HEALTH REPORT

NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, WD AGO 8-122, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatisms (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The proportion of the average daily strength of the command which is confined to hospital or quarters (including patients evacuated from overseas) is given in the "Year-to-date" section of the summary table. The mean number of noneffectives per thousand strength shown in the weekly section of the summary table includes only patients admitted to hospital or quarters from activities in the Continental United States; these figures, therefore, are noneffective rates for troops stationed in the United States.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casualties, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

MORTALITY DATA

Recent studies indicate that the reporting of deaths on WD AGO 8-122 is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 10 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

EXPLANATORY MATTER

In reading the detail tables, it should be born in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (#) is placed after the name of the station.

COMMENT ON CURRENT TRENDS

MORBIDITY FROM: All Causes: (Page 3)

Morbidity from all causes during the week ended 7 June increased, being reported at 504 admissions per 1000 troops per annum, as compared with 461 such admissions during the preceding week.

Injury: (Page 3)

Injury admissions increased to 38 per 1000 troops per annum; highest rate was that reported from the Eighth Service Command (49 per 1000), ranging down to 16 per 1000 in the Military District of Washington.

Diseases: (See opposite page.)

Morbidity from all diseases in the United States as a whole during the week increased from 427 to 466 admissions per 1000 troops per annum.

Respiratory Diseases:

(See opposite page and pages 6 and 7.)

The rate for colds, influenza, etc. decreased during the week from 81 per 1000 to 76 per 1000.

Morbidity from these causes was highest in the Seventh Service Command.

Admissions for all forms of pneumonia remained at 11 per 1000 troops per annum. Highest morbidity (20 admissions per 1000 troops per annum) was reported from the Fourth and Fifth Service Commands; rates ranged downward to 2 per 1000 (only 1 case) in the First Service Command. The rate for pneumonias other than primary atypical increased from 3.0 to 4.1 per 1000 troops per annum.

Venereal Diseases:

Admissions for "new not-EPTS" venereal diseases increased during the week from 55 to 62 per 1000 troops per annum.

Other Communicable Diseases:

The rate for scarlet fever was reported at 3.7 admissions per 1000 troops per annum during the current week, as compared with the previous week's rate of 3.3

The rate for rheumatic fever increased from 2.2 to 2.9 per 1000 troops per annum.

Admissions for streptococcal sore throat numbered 1.0 per 1000 troops per annum.

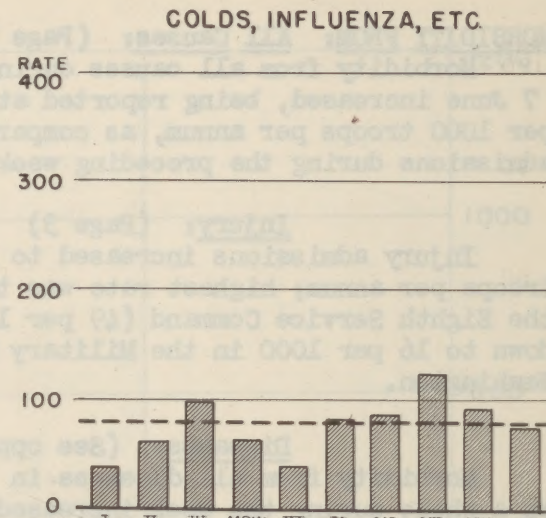

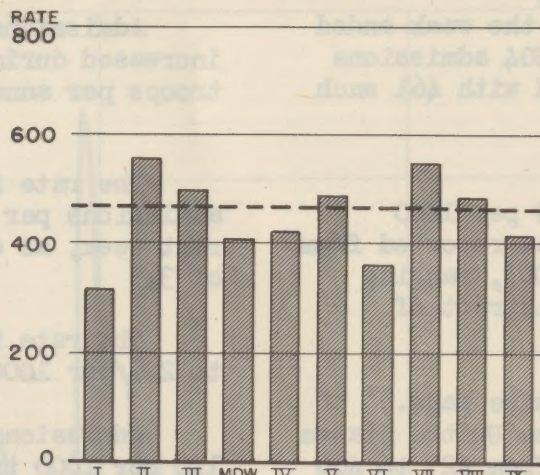

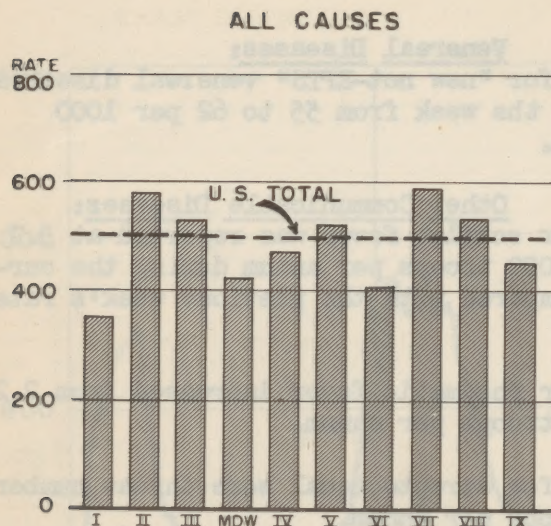

MORBIDITY AT TRAINING CENTERS: (Page 13)

It has long been recognized that most respiratory diseases, common contagious diseases, and streptococcal infections present a more serious problem among men coming into the Army than among troops with comparatively long service. The table on page 13 furnishes a rough measure of this difference, since it shows morbidity at stations at which training centers for recruits are located. Separate totals for all stations having training centers and for stations at which no training centers are located are presented; in addition, totals are shown separately for training centers of the Air Forces, Ground Forces, and Service Forces.

COMMENT ON CURRENT TRENDS (CONT.)

It should be noted that a distinction cannot be made, on the basis of the Statistical Health Report, between those troops at a given station who are undergoing basic training and those who are engaged in other activities. Data must be shown for all troops at stations at which training centers are located; these data, therefore, cannot be said to measure morbidity among trainees alone.

Stations having training centers are marked in the tables in this report as follows:

- 1/ Army Service Forces Training Center.
- 2/ Army Air Forces Basic Training Center.
- 3/ Army Ground Forces Replacement Training Center.
- 4/ Personnel Center.

The admission rate for diseases at stations having training centers exceeded that at other stations by about 5 per cent.

Morbidity from colds, influenza, etc., at stations having training centers, while about 50 per cent higher than that at other stations, decreased by about 10 per cent during the week.

Admissions for pneumonia at training center stations as a whole increased from 20 to 22 per 1000 troops per annum, but contrasted with the rate of 7 at other stations.

Morbidity from scarlet fever at stations having training centers increased from 5 to 8 admissions per 1000 troops per annum. The rate for rheumatic fever also increased during the week (3 to 4 admissions per 1000 troops per annum) at stations having training centers.

Venereal disease admissions at stations having training centers increased during the week from 54 to 57 per 1000 troops per annum.

NONEFFECTIVE RATE: (Page 9)

The noneffective rate for personnel stationed in the continental United States is estimated at 37.9.

PATIENTS REMAINING UNDER TREATMENT: (Page 9)

The number of patients remaining in hospital in the Zone of Interior, including patients transferred from overseas, decreased during the week to 72,128, as compared with 75,315 at the end of the previous week.

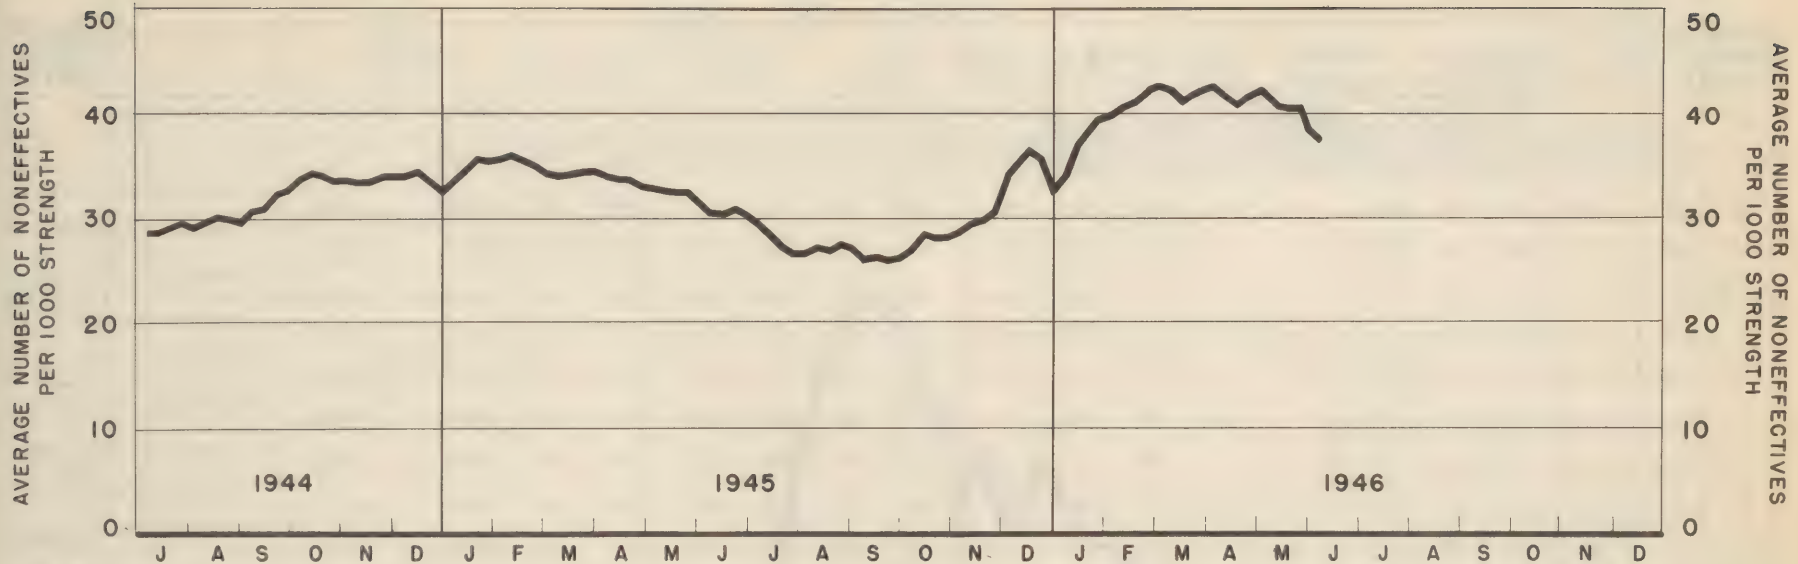

The number of neuropsychiatric cases remaining was 4656 or about 50 less than at the end of the previous week. Battle wounded remaining decreased by about 1000 to number 15,241.

CERTIFICATES OF DISABILITY FOR DISCHARGE: (Page 10)

In the week ended 7 June there were 1773 enlisted personnel discharged by CDD (about 50 less than in the previous week). These discharges included 71 accomplished at Air Force medical activities. Among them were 335 neuropsychiatric cases.
